Overview: The 2020 influenza season so far

Influenza-like illness (ILI) for the 24th reporting week is similar to last week and remains well below the average activity threshold with 0.7 ILIs per 1000 patients seen.

The number of notified cases of laboratory confirmed influenza is 91% lower than the number notified by the same time in 2019. The majority of notified cases over the season have been type A (88.5%), and type A cases are older than type B cases.

Zero swabs were received from VicSPIN this week.

Figure 1. Routinely notified influenza cases, VicSPIN and National Home Doctor Service (NHDS) ILI consultation proportions, Victoria, 2015 – 2020

National Home Doctor Service (Victoria)

- The ILI proportion for this week is 0 ILI cases per 1,000 patients seen (Figure 1).
- ILI activity is lower than last week and remains below the average activity threshold range of 10-35 ILI cases per 1,000 patients seen.
Victorian Sentinel Practice Influenza Network

- The ILI proportion measured by VicSPIN is similar to last week and continues to be well below the average activity threshold with 0.7 ILI cases per 1,000 patients seen. (Figures 1 & 2, and Table 1).
- Zero swabs were received from VicSPIN this week (Figure 3 and Table 1).

Observations from other influenza surveillance systems

**Notified cases of laboratory confirmed influenza**

- The number of notified cases of laboratory confirmed influenza is similar to last week with 9 cases compared to 7 in the previous week.
- A total of 4,938 cases of laboratory confirmed influenza have been processed so far in 2020, a 91% decrease on the number notified by the same time in 2019 (Figure 1).
- Year to date, 88.5% of notified cases have been type A (14% of Type A cases are aged less than 10 years and 16% aged 65 years and over) and 11.5% have been type B (20% of Type B cases are aged less than 10 years and 7% aged 65 years and over).

**World Health Organization Collaborating Centre for Reference and Research on Influenza**

- The strains included in the 2020 influenza vaccine are: A/Brisbane/02/2018 (H1N1)pdm09-like virus; A/South Australia/34/2019 (H3N2)-like virus and B/Washington/02/2019-like (B/Victoria lineage) and B/Phuket/3073/2013-like (B/Yamagata lineage) virus. All seasonal influenza vaccines available for use in Australia in 2020 are quadrivalent vaccines (QIV).
- A total of 91 Victorian isolates have been strain-typed by the WHO to date: 31 as A/Brisbane/02/2018-Like; 45 as A/Brisbane/02/2018-Low Reactor; 5 as A/South Australia/34/2019-Like; 3 as A/South Australia/34/2019-Low Reactor; and 7 as B/Washington/02/2019-Like.
- No isolates have shown resistance to zanamivir, however two isolates have shown resistance to oseltamivir, among the 322 Australian isolates tested so far in 2020.
