

Report No. 26: Week ending 31 October 2021

Overview: The 2021 influenza season so far

Influenza-like illness (ILI) remains **below the average activity** threshold for the last reporting week for 2021, with **0 ILIs per 1000 patients seen**.

The number of notified cases of laboratory confirmed influenza is **98% lower** than the number notified by the same time in 2020. The majority of notified cases have been **type A (83%)**. There have also been four cases of co-infection with influenza type A and B, and three cases of influenza type C.

Zero swabs were received from VicSPIN this week.

Zero swabs tested positive for influenza.

Figure 1. Routinely notified influenza cases, VicSPIN and National Home Doctor Service (NHDS) ILI consultation proportions, Victoria, 2015 – 2021

National Home Doctor Service (Victoria)

- The ILI proportion for this week is **0.7 ILI case per 1,000 patients seen** (Figure 1).
- ILI activity remains **below** the average activity threshold range of 10-35 ILI cases per 1,000 patients seen.

Victorian Sentinel Practice Influenza Network

- The ILI proportion measured by VicSPIN for this week, is well below the average activity threshold with **0 ILI cases per 1,000 patients seen**. (Figures 1 & 2, and Table 1)
- **Zero swabs** were received from VicSPIN this week. (Figure 3 and Table 1)
- **Zero swabs** tested positive for influenza. (Figure 3 and Table 1)

*Table 1. Summary of reporting from general practice sentinel sites, week ending 31 October 2021.**

	Week	Year-to-date
Number (%) of general practitioners reporting	29 (100%)	
Total patients seen	2,522	67,659
Total patients with ILI	0	77
Consultation rate for ILI (per 1,000 patients)	0	1.1
Number of specimens received	0	38
Number (%) positive for influenza	0 (0%)	1 (2.6%)

* These numbers are subject to change as data are processed and updated.

Observations from other influenza surveillance systems

Notified cases of laboratory confirmed influenza

- The number of notified cases of laboratory confirmed influenza for this week is 1 case.
- A total of 83 cases of laboratory confirmed influenza have been processed so far in 2021, a 98% decrease on the number notified by the same time in 2020 (Figure 1).
- Year to date, 83% of notified cases have been type A (18% of Type A cases are aged less than 10 years and 24% aged 65 years and over) and 10% have been type B (87.5% of Type B cases are aged between 10 and 65 years).
- There have been three notified cases of influenza type C and four notified cases of co-infection with influenza type A and B.
- These numbers are subject to change as data are processed and uploaded.

World Health Organization Collaborating Centre for Reference and Research on Influenza

- The strains included in the 2021 egg-based influenza quadrivalent vaccine are: A/Victoria/2570/2019 (H1N1)pdm09-like virus, A/Hong Kong/2671/2019 (H3N2)-like virus, B/Washington/02/2019-like (B/Victoria lineage) and B/Phuket/3073/2013-like (B/Yamagata lineage) virus. The trivalent vaccine excludes the B/Yamagata lineage virus.
- The strains included in the 2021 cell-based influenza quadrivalent vaccine are: A/Wisconsin/588/2019 (H1N1)pdm09-like virus, A/Hong Kong/2671/2019 (H3N2)-like virus, B/Washington/02/2019-like (B/Victoria lineage) and B/Phuket/3073/2013-like (B/Yamagata lineage) virus.

- A total of 2 *Victorian* isolates has been strain-typed by the WHO to date:

STRAIN A H1PDM09

0 as A/Victoria/2570/2019-Like

0 as A/Victoria/2570/2019-Low Reactor

STRAIN A H3

0 as A/Darwin/726/2019-Like

1 as A/Darwin/726/2019-Low Reactor

STRAIN B VICTORIA

1 as B/Washington/02/2019-Like

0 as B/Washington/02/2019-Low Reactor

STRAIN B YAMAGATA

0 as B/Phuket/3073/2013-Like

0 as B/Phuket/3073/2013-Low Reactor

N.B. A/Darwin/726/2019 is the cell equivalent of A/Hong Kong/2671/2019-H3N2 vaccine strain.

- No isolates have shown resistance to zanamivir or oseltamivir, among the 29 Australian isolates tested so far in 2021.
