

Report No. 3: Week ending 24 April 2022

Overview

In 2022, the Victorian Sentinel Practice Influenza Network (VicSPIN), will report on influenza, SARS-CoV-2 and other respiratory viruses circulating in the community.

The 2022 influenza season so far

Influenza-like illness (ILI) activity is currently within the average threshold for this week with 8 ILIs per 1000 patients seen.

The number of notified cases of laboratory confirmed influenza is **almost ten times higher** than the number notified by the same time in 2021. All notified cases have been **type A (100%)**.

Two swabs were received from VicSPIN this week.

No swabs tested positive for influenza.

The 2022 SARS-CoV-2 case numbers so far

The number of routinely notified COVID-19 cases based on PCR and RAT testing so far in 2022 is **1,329,294 cases**.

The number notified by the same time in 2021 was 136 cases.

There have been **61,493 cases** reported in the past week.

There have been **20,433,460** PCR tests to date. The total number of rapid antigen tests (RATs) conducted is unknown.

No swabs received from VicSPIN this week tested positive for SARS-CoV-2.

Figure 1. Routinely notified influenza cases and VicSPIN ILI consultation proportions, Victoria, 2015 – 2022

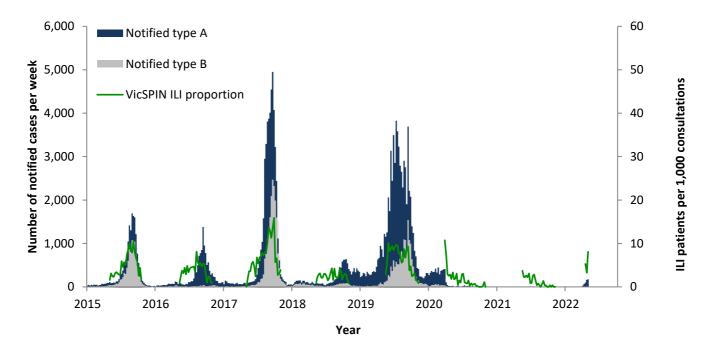

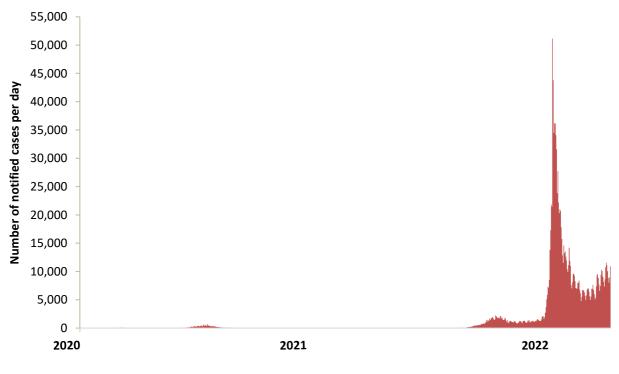

Figure 2. Daily routinely notified SARS-CoV-2 cases based on PCR and RAT testing, Victoria, 2020 – 2022

Year

Victorian Sentinel Practice Influenza Network

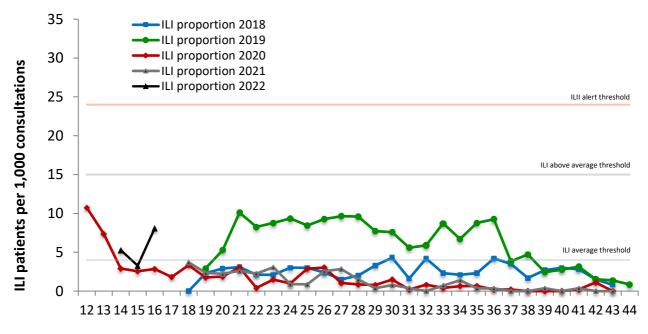

- The ILI proportion measured by VicSPIN for this week is within the average activity threshold with **8 ILI cases per 1,000 patients seen**. (Figures 1 & 3, and Table 1)
- **Two swabs** were received from VicSPIN this week. (Figure 4 and Table 1)
- No swabs tested positive for influenza. (Figure 4 and Table 1)
- No swabs tested positive for SARS-CoV-2. (Figure 4 and Table 1)

Table 1. Summary of reporting from general practice sentinel sites, week ending 24 April 2022.*

	Week	Year-to-date
Number (%) of general practitioners reporting	26 (100%)	
Total patients seen	1114	4,730
Total patients with ILI	9	25
Consultation rate for ILI (per 1,000 patients)	8	5.3
Number of specimens received	2	10
Number (%) positive for influenza	0 (0%)	2 (20%)
Number (%) positive for SARS-CoV-2	0 (0%)	1 (10%)

* These numbers are subject to change as data are processed and updated.

Week ending

Observations from other influenza and SARS-CoV-2 surveillance systems

Notified cases of laboratory confirmed influenza and SARS-CoV-2

- The number of notified cases of laboratory confirmed influenza for this week is 174 (Table 2).
- A total of 565 cases of laboratory confirmed influenza have been processed so far in 2022, almost ten-fold increase on the number notified by the same time in 2021 (Figure 1 and Table 2).
- Year to date, 100% of notified cases have been type A (8% of Type A cases are aged less than 10 years and 8% aged 65 years and over).
- The number of total SARS-CoV-2 cases for this week is 61,493 (Table 2).
- A total of 1,329,294 probable and confirmed SARS-CoV-2 cases have been notified so far in 2022 compared with 121 in 2021 (Table 2)
- There have been 20,433,460 PCR tests to date. The total number of rapid antigen tests (RATs) conducted is unknown
- These numbers are subject to change as data are processed and uploaded.

Table 2. Summary of notified influenza and SARS-CoV-2 cases, week ending 24 April 2022.

	Week	2022 Year-to-date	2021 Year-to-date
Notified influenza cases	174	565	58
Notified SARS-CoV-2 cases	61,493	1,329,294	136

World Health Organization Collaborating Centre for Reference and Research on Influenza

- The strains included in the 2022 egg-based Southern Hemisphere seasonal influenza quadrivalent vaccines are: A/Victoria/2570/2019 (H1N1)pdm09-like virus, A/Darwin/9/2021 (H3N2)-like virus, B/Austria/1359417/2021-like (B/Victoria lineage) virus and B/Phuket/3073/2013-like (B/Yamagata lineage) virus.
- The strains included in the 2022 cell-based Southern Hemisphere seasonal influenza quadrivalent vaccines are: A/Wisconsin/588/2019 (H1N1)pdm09-like virus, A/Darwin/9/2021 (H3N2)-like virus, B/Austria/1359417/2021like (B/Victoria lineage) virus and B/Phuket/3073/2013-like (B/Yamagata lineage) virus.
